

Name: Tundiya Abhi

Roll no: 202211095

sex: Male

Age: 21

1) Our London business is good, but Vienna and Berlin are quiet. Mr. D. Lloyd has gone to Switzerland, and I hope for good news. He will be there for a week at 1496 Louvet Street and then goes to Turin and Rome. He will join Colonel Parry and arrive at Athens, Greece, on November 27 or December 2. Letters there should be addressed to King James Blvd 3580. We expect Charles E. Fuler on Tuesday. Dr. L. Mc Quaid and Robert Unger, Esq. left on the 'Y.X.' Express tonight.

2) Semantic Security say that $\text{Pr}(\text{adversary can compute } f(m)) = \text{function that adversary want to compute over underlying msg. in absence of encryption oracle equals probability with which adversary can compute } f(m))$.

Assume there is an Adversary A' and an Adversary A . ~~Pr~~ Assume A' knows only $h(m) \rightarrow$ history function and A knows ciphertext with history function, so probability of computing $f(m)$ is probability would be same for A' and A . In short ciphertext is no help in computing $f(m)$.
